PROFESSONAL SUMMARY

Atmospheric scientist specializing in **AI-driven weather prediction and numerical weather modeling**, with expertise in **WRF simulations, statistical post-processing, and deep learning architectures** for extreme weather applications using **Mesonet** observations. Developed and published **novel ML frameworks** for wind gust nowcasting**, precipitation forecasting, and vertical wind profile estimation** using datasets such as **ERA5, CERRA, NOW23, and lidar profiler observations**. Proficient in **TensorFlow, PyTorch, Scikit-Learn**, and advanced **HPC workflows**, with transferable skills for cloud environments. Strong record of **peer-reviewed publications, international conference presentations, and collaborative projects**, demonstrating ability to work independently while contributing to large-scale research efforts.

EDUCATION

Indian Institute of Technology Madras — Chennai, Tamil Nadu, India

Integrated MS & Ph.D., Mechanical Engineering — 2017-2022

- Dissertation: "Sensitivity based Calibration Strategy with Data Assimilation to Improve the Prediction of Cyclones over the Indian Subcontinent"

Rajiv Gandhi University of Technology – NUZVID — Nuzivid, Andhra Pradesh, India

Bachelor of Technology (Honors), Mechanical Engineering — 2011-2015

PROFESSIONAL EXPERIENCE

University at Albany — Albany, New York, the US

Postdoctoral Associate — September 2024 - present

Atmospheric Sciences Research Center

Technical University of Delft — Delft, The Netherlands

Postdoctoral Researcher — September 2022 -August 2024

Department of Geosciences and Remote Sensing

Faculty of Civil Engineering and Geosciences

Indian Institute of Technology Madras — Chennai, Tamil Nadu, India

Institute Postdoctoral Equivalent Fellowship — January 2022 – June 2022

RESEARCH INTERESTS

Numerical weather prediction; atmospheric boundary layer processes; machine learning for weather and climate; extreme weather and hydrometeorological prediction; deep learning for wind gust nowcasting and quantitative precipitation forecasting; statistical post-processing of NWP outputs; reanalysis and observational data integration (ERA5, CERRA, lidar profilers, Mesonet observations).

SELECTED ACCOMPLISHMENTS

- Fourth place of the NeurIPS-2023 competition: https://weather4cast.net/neurips2023/ 2023

GRANTS

- NWO/EINF-grant EINF-8612 2024
  Awarded 1 million standard billing units (SBUs) for the proposal titled "European Scalable Complementary Offshore Renewable Energy Sources (EU-SCORES) - Solar-Wind hindcasts (2024)"

MACHINE LEARNING ACTIVITIES

Participation in Competitions

- NeurIPS-2023 Weather4Cast: Super-Resolution Rain Movie Prediction under Spatiotemporal Shifts 2023
  Ranked 4th, https://weather4cast.net/neurips2023

Online Courses

- Coursera: Introduction to Machine learning 2017

TECHNICAL SKILLS IN MACHINE LEARNING

Frameworks & Libraries

- TensorFlow, PyTorch, Torch Lightning, Scikit-Learn, AutoML

ML & DL models

- Classical: Gaussian Process Regression, SVM, Random Forest, XGBoost, LightGBM
- Deep Learning:
  - Artificial Neural Networks (ANN)
  - TabNet
  - Convolution Neural Networks (CNN)
  - Sifted Window Multiheaded self-attention transformer (SwinTransformer)
  - Generative adversarial network (GAN)

Data processing tools

- Xarray, Zarr, Numpy, Dask

REVIEWING ACTIVITIES

Papers reviewed for: Environmental Research Letter; Journal of Hydrology, wind energy science

TEACHING

Delft University of Technology

- CIEM4210: Marine Renewables (Module B1, Q4, 2024)
- Lecture 11 on Wind resource assessment

RESEARCH MENTORSHIP

Dr. Jaya Singh (Postdoctoral associate, Atmospheric Sciences Research Center, UAlbany)

- Provided technical training on the application of machine learning for wind gust estimation from global reanalysis datasets

Ekaterina Belash (Graduate research assistant, Atmospheric Sciences Research Center, UAlbany)

- Conducted hands-on training on NVIDIA A100 GPU resources, focusing on multi-GPU execution and development of deep-learning frameworks for wind-gust downscaling

Suqian Chu (Graduate research assistant, Atmospheric Sciences Research Center, UAlbany)

- Provided hands-on training on NVIDIA A100 GPU resources with emphasis on implementing deep-learning-based downscaling for future climate projections
